IT Certification Guaranteed, The Easy Way!

Exam : **C_HCMOD_01**

Title : SAP Certified Application
Associate - SAP HANA Cloud
Modeling

Vendor : SAP

Version : DEMO

NO.1 Why would you use the SQL analyzer? Note: There are 2 correct answers to this question.

- A. To warn of potential performance issues related to calculated columns
- B. To display the execution time of a calculation view
- C. To preview data at the node level of a calculation view
- D. To identify the root data sources of a function

Answer: B,C

NO.2 You want to create a star schema using a calculation view. The measures are based on columns from two transaction tables. DIMENSION calculation views provide the attributes. What is the correct approach?

- A. Combine the transaction tables using an aggregation node in a calculation view of type CUBE with star join./Use a star join node to join the DIMENSIONS to the fact table.
- B. Combine the transaction tables using a star join node in a calculation view of type CUBE with star join./Use a join node to join the DIMENSIONS to the fact table.
- C. Combine the transaction tables using a join node in a calculation view of type CUBE with star join./Use a star join node to join the DIMENSIONS to the fact table.
- D. Combine the transaction tables using a star join node in a calculation view of type CUBE with star join./Use the same star join node to connect the DIMENSIONS to the fact table.

Answer: C

NO.3 Which project structure object corresponds to a unique HDI container?

- A. database module
- B. src folder
- C. space
- D. project

Answer: B

NO.4 You want to ensure that your calculation view does not give unexpected results based on the selected columns in the query. What is the recommended approach for verifying the results?

- A. Execute a custom SQL query in the SQL Console.
- B. Select and deselect columns from the output mapping.
- C. Set the HIDE property for columns NOT required.
- D. Select Data Preview for the calculation view.

Answer: A,D

NO.5 What are some best practices when developing calculation views? Note: There are 2 correct answers to this question.

- A. Avoid defining joins on calculated columns.
- B. Aggregate at the lowest possible node.
- C. Include all data flow logic within one calculation view.
- D. Model star schemas using a sequence of join nodes.

Answer: A,C
